**Supplementary Table 1- Mouse and Chicken proteomics data sets**

The first column indicates the species from which the sample was taken. The experiment identifier indicates the postnatal day for mouse samples and brain region for chicken samples, the biological replicate number and the technical replicate number. The third and fourth columns indicate the total number of spectra collected, and the number of peptide-spectrum matches (PSMs) with  $q \leq 0.01$ .

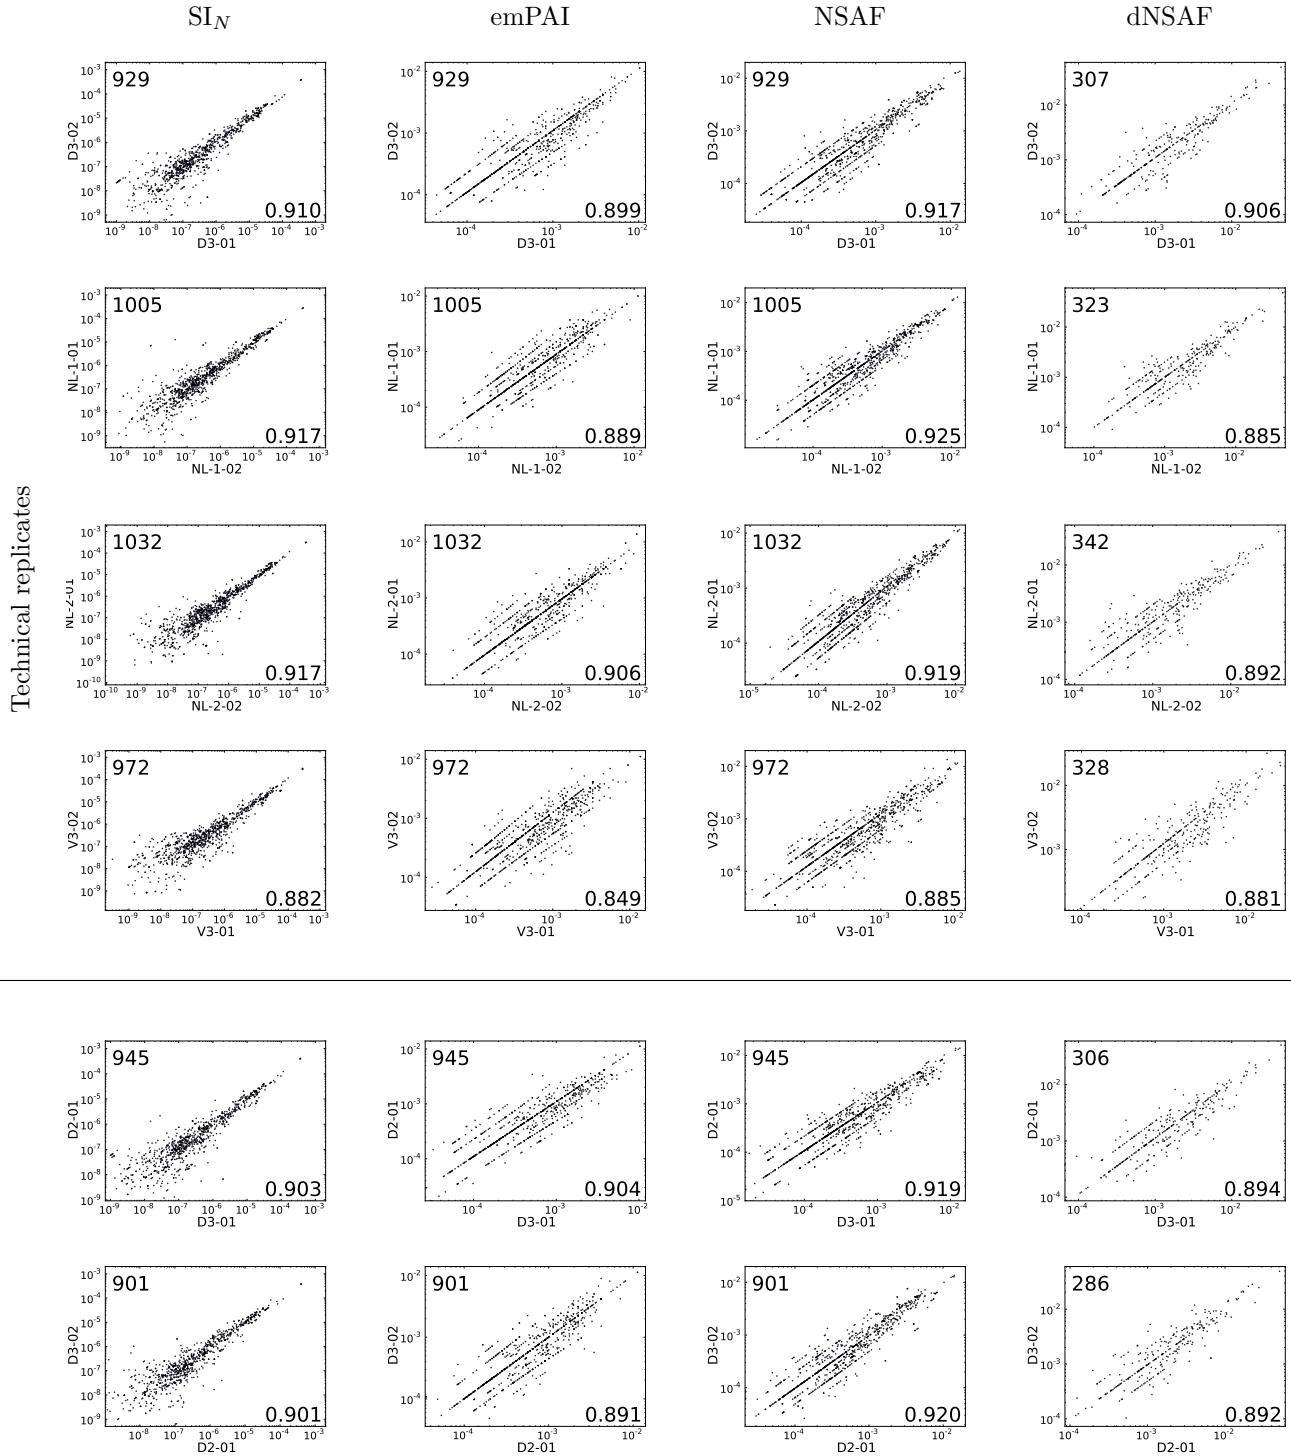

Species	Experiment	spectra	PSMs
mouse	P7-1-01	21819	5464
mouse	P7-2-01	18969	5115
mouse	P21-1-01	20059	5142
mouse	P21-1-02	21289	4265
mouse	P21-2-01	18943	5196
mouse	P21-2-02	21819	4722
chicken	D2-01	17657	3085
chicken	D3-01	18538	3332
